# PRESENTATION

Dear colleagues:

I have the responsibility of organising the next Eucarpia Cereal Section meeting, which will be held at Lleida (Spain) from 13th to 17th November 2006. The title of the meeting is Cereal Science and Technology for Feeding Ten Billion People: Genomics Era and Beyond.

The topic areas that will be covered are:

1. Biodiversity for useful genes.
2. Integration of molecular assisted selection into conventional cereal breeding.
3. Genetic control of limiting factors for cereal production.
4. New concept of healthy grains for high quality food.
5. Genetics and breeding for sustainable cereal production.
6. New strategies for better understanding gene expression.
7. The colloquium between genome and metabolome to understand plant growth and development.

Well-known expert colleagues who will introduce these main topics will give the keynote lectures. Our city is medium-sized and its friendly environment will provide us with the right atmosphere to successfully cover our scientific objectives. Lleida is located 160 km south-west from Barcelona and 450 km north-east from Madrid, and is well communicated with both by high-velocity trains.

I, on behalf of the Organising and Scientific committees, want to invite you and look forward to meeting you here in November 2006.

José Luis Molina-Cano  
Chairman of the Cereal Section of Eucarpia
